Research Summary

Formed foil for aluminum electrolytic capacitors is a critical component that serves as the anode or cathode material, enabling the capacitor's high capacitance and efficiency. This foil is made from high-purity aluminum that undergoes an electrochemical etching process to increase its surface area, enhancing its ability to store charge. The etched foil is then subjected to a formation process, where a thin aluminum oxide layer is created on its surface through an electrochemical reaction. This oxide layer acts as the dielectric material, providing the necessary insulation between the capacitor's electrodes while maintaining compactness and high voltage capacity. Formed foil is essential for achieving the desired performance characteristics in applications ranging from power supplies to automotive and industrial electronics.

The major global manufacturers of Formed Foil for Aluminum Electrolytic Capacitors include Dongguan HEC Tech R&D, Nippon Chemi-Con, Nantong Haixing Electronics, Nichicon, JCC, Yangzhou Hongyuan Electronics, Xinjiang Joinworld, Liton, TDK Foil,

Nantong South Light Electronic Material, Guangdong Huafeng, SATMA, Nantong Jianghai Capacitor, Hunan Aihua Group, etc. The global players competition landscape in this report is divided into three tiers.
