### Research Summary

Foundry coke is a high-quality carbon material used in foundries for the purpose of melting and refining metals, particularly iron and steel. It is produced by heating coal in the absence of air to drive off volatile components, leaving behind a porous, carbon-rich material. Foundry coke is characterized by its high carbon content, low impurities, and excellent structural strength, making it an ideal fuel and reducing agent in the production of iron and steel. During the metal-smelting process, foundry coke not only provides the necessary heat for melting but also reacts with metal oxides, aiding in the reduction of metals from their ores. The size and quality of foundry coke are critical factors in its effectiveness, as it must provide uniform heat distribution and promote efficient chemical reactions within the furnace. Foundry coke plays a vital role in ensuring the cost-effective and high-quality production of metals in the foundry industry.

The major global manufacturers of Foundry Coke include ABC Coke (Drummond ), Shandong Coking Group, Shanxi Huifeng Xingye Group, Victoria, Shanxi Coking Coal Group, OKK, Italiana Coke, Jiangsu Surun Highcarbon, Shanxi Antai, Industrial
