Research Summary

FPD photomasks, or flat panel display photomasks, are specialized masks used in the manufacturing of flat panel displays such as liquid crystal displays (LCDs), organic light-emitting diode (OLED) displays, and plasma displays. These photomasks are essential in the photolithography process, where patterns are transferred onto the display substrate to create the various components of the display, including pixels, transistors, and electrodes. FPD photomasks are typically made of glass or quartz substrates coated with a light-sensitive material, with the desired patterns etched or deposited onto the surface. These patterns, designed using computer-aided design (CAD) software, are transferred onto the display substrate during exposure to light, allowing for precise and accurate replication of the desired features. FPD photomasks play a critical role in determining the resolution, performance, and quality of flat panel displays, making them a crucial component in the manufacturing process.

The major global manufacturers of FPD Photomasks include Hoya Corporation, Dai Nippon Printing Co., Ltd, SK-Electronics, Toppan Photomasks, Inc, Photronics(PKL), LG Innotek, Shenzhen Qingyi Photomask, Shenzhen Newway Photomask, Taiwan
