Research Summary

A fractional horsepower (FHP) motor refers to an electric motor with a power rating significantly less than one horsepower. These motors are commonly used in various small-scale applications where the demand for mechanical power is modest. Fractional horsepower motors are characterized by their compact size, energy efficiency, and suitability for tasks requiring lower power output, such as in household appliances like fans, blenders, or small pumps. FHP motors come in various types, including AC (alternating current) and DC (direct current), and their compact design makes them well-suited for situations where space is limited. The fractional horsepower rating can range from a fraction of a watt to several hundred watts, depending on the specific application requirements. These motors are cost-effective, reliable, and find widespread use in a diverse range of consumer and industrial products.

The major global manufacturers of Fractional HP Motor include Allied Motion Technologies, Johnson Electric, Regal Beloit, ASMO, Maxon Motor, Weg, Minebea, Ametek, Danaher Motion, Nidec Corporation, Faulhaber, Baldor Electric, Portescap,
