Research Summary

A frequency converter is an electronic device designed to alter the frequency of alternating current (AC) power. It is commonly used in power systems to convert electrical energy from one frequency to another. Frequency converters are crucial in scenarios where the power grid frequency does not match the requirements of a specific device or system. For instance, in international power distribution, different countries may use different frequencies (such as 50 Hz or 60 Hz). Frequency converters can bridge this gap, allowing equipment designed for one frequency to operate seamlessly in environments with a different frequency. They find applications in various industries, including manufacturing, aerospace, and transportation, where precise control of electrical power frequency is essential for the proper functioning of equipment and machinery.

The major global manufacturers of Frequency Converter include ABB, SIEMENS, Schneider, Danfoss, Rockwell, YASKAWA, MITSUBISHI ELECTRIC, Fuji Electric, Inovance Technology, Delta, GE Power Conversion, INVT, Hiconics Eco-energy Technology, VEICHI, HopeSenlan Science and Technology, POWTRAN, EURA

DRIVES, Sichuan Jialing Electrical, Xinfengguang Electronics, SINEE, etc. The global players competition landscape in this report is divided into three tiers.
