### Research Summary

Fiber Reinforced Plastic (FRP) grating is a type of composite material made from reinforced fibers, typically fiberglass, embedded in a resin matrix. This grating is widely used in industrial, commercial, and residential applications as a lightweight and durable alternative to traditional metal or wood gratings. FRP grating offers notable benefits, including corrosion resistance, high strength-to-weight ratio, and resistance to various chemicals and weather conditions. It is commonly used in environments where corrosion is a concern, such as chemical processing plants, offshore platforms, and marine applications. The grating's open design allows for efficient drainage and ventilation, and it is available in various sizes, shapes, and surface textures to suit different needs. FRP grating finds utility in walkways, platforms, stairs, and other structural components, providing a cost-effective and long-lasting solution for areas requiring high-strength, corrosion-resistant materials.

The major global manufacturers of FRP Grating include MEISER, Lionweld Kennedy, Fibrolux, Techno-Composites, Fiber Grage, Bedford, Liberty Pultrusions, Amico Seasafe, Strongwell, National Grating, Delta Composites LLC, Mcnichols, Daikure, AGC
