Research Summary

Fructooligosaccharide (FOS) from sugar is a naturally occurring sweetener and prebiotic derived from sucrose, the most common table sugar. Through a enzymatic process, sucrose is broken down into shorter chains of fructose molecules, resulting in FOS. This oligosaccharide is found in various plant sources, such as fruits and vegetables, and can be isolated for use as a sweetening agent in food and beverages. Apart from providing sweetness with fewer calories than sucrose, FOS possesses prebiotic properties, serving as a substrate for beneficial gut bacteria. This not only contributes to digestive health but also supports the overall well-being of the microbiome. FOS derived from sugar is thus valued not only for its sweetening capabilities but also for its potential health-promoting effects on the gastrointestinal system.
