Research Summary

FTTx Blown Fiber Cable is a type of optical fiber cable designed for use in FTTx (Fiber to the X) networks, where X can represent various termination points such as home (FTTH), curb (FTTC), or building (FTTB). Unlike traditional pre-terminated fiber optic cables, blown fiber cables are specifically engineered for the installation method known as "blown fiber." In this process, individual optical fibers are blown or pushed into microducts within a cable infrastructure. This technique allows for efficient and scalable deployment of fiber optic networks as only the required fibers are installed, leaving room for future expansion without the need for extensive cable replacement. FTTx Blown Fiber Cables are characterized by their flexibility, reduced diameter, and compatibility with microducts, facilitating ease of installation and maintenance in urban and residential environments where space constraints may be a consideration. This technology is integral to the advancement of high-speed broadband services and the expansion of fiber optic connectivity to homes and businesses.

The major global manufacturers of FTTx Blown Fibre Cable include Corning, YOFC,

ZTT, Sumitomo Electric, FiberHome, Hengtong, Prysmian Group, Furukawa Electric, AFL, Tongding Interconnection, CommScope, Sopto, Huiyuan Optical Communications, Twentsche Kabelfabriek (TKF), Connectix, etc. The global players competition landscape in this report is divided into three tiers.
