Research Summary

Fully fluorinated fluoropolymers are a class of synthetic polymers characterized by a high degree of fluorine substitution, where all or nearly all of the hydrogen atoms in the polymer chain are replaced by fluorine atoms. This extensive fluorination imparts exceptional chemical resistance, thermal stability, low surface energy, and nonstick properties to these polymers. Poly(tetrafluoroethylene) (PTFE), known by the brand name Teflon, is one of the most well-known fully fluorinated fluoropolymers. These materials find applications in a wide range of industries, including manufacturing, electronics, and the chemical processing industry, due to their unique combination of properties. Fully fluorinated fluoropolymers are valued for their ability to withstand harsh chemical environments, resist high temperatures, and provide low-friction surfaces, making them essential in applications such as nonstick coatings, gaskets, seals, and insulation.

The major global manufacturers of Fully Fluorinated Fluoropolymers include Chemours, Daikin, 3M, Solvay, Gujarat, AGC, HaloPolymer, Dongyue, Zhejiang Juhua, Meilan

Group, 3M, etc. The global players competition landscape in this report is divided into three tiers.
