Research Summary

Functional textile fabric refers to specially engineered textiles designed to provide enhanced performance characteristics beyond basic aesthetics and comfort. These fabrics incorporate advanced properties such as moisture-wicking, antibacterial protection, UV resistance, thermal regulation, and water or stain repellency, making them suitable for various applications in sportswear, medical textiles, military gear, and smart textiles. Functional textiles achieve their properties through specialized fiber structures, coatings, or embedded technologies such as phase-change materials and nanotechnology. By improving durability, comfort, and protection, functional textile fabrics enhance user experience and are widely used in industries requiring high-performance materials.
