Research Summary

Fused magnesia, also known as electrofused magnesia or electro-fused magnesia, is a high-purity form of magnesia (magnesium oxide) produced through an electrofusion process. This involves melting raw magnesite or magnesium oxide in an electric arc furnace and then cooling and solidifying the molten material to form fused magnesia crystals. The resulting product has a dense and crystalline structure, imparting superior chemical and physical properties compared to other forms of magnesia. Fused magnesia is known for its high refractoriness, excellent resistance to corrosion and thermal shock, making it a valuable refractory material in industries such as steelmaking, cement production, and glass manufacturing. Its robust characteristics make fused magnesia a critical component in the development of refractory linings for high-temperature environments in various industrial applications.

The major global manufacturers of Fused Magnesia include RHI-Magnesita, Grecian Magnesite, Magmamin, Roskill, Tateho Chemical, Erzkontor, Haicheng Houying Group, Haicheng Magnesite Refractory, Jiachen Group, Haicheng Huayu Group, Dashiqiao
