Research Summary

Fused silica, also known as fused quartz, is a high-purity form of silicon dioxide (SiO₂) that is produced by melting silica sand or quartz crystals at extremely high temperatures and then cooling and solidifying the molten material. The resulting product has a non-crystalline, amorphous structure, distinguishing it from crystalline quartz. Fused silica exhibits exceptional thermal stability, low thermal expansion, and high transparency across a broad spectrum, including ultraviolet (UV) light. These properties make fused silica highly desirable for various applications, especially in optics and electronics. It is commonly used in the manufacturing of precision optical components such as lenses, windows, and prisms due to its optical clarity and thermal resistance. In electronics, fused silica is employed in the production of high-performance semiconductor components and as an insulating material in integrated circuits.

The major global manufacturers of Fused Silica include Lianyungang Taosheng Fused Quartz Co. Ltd, Heraeus, Lianyungang Haoyu quartz, 3M, Jiangsu Zhongsheng Silicon Mstar Technology Ltd, Xin Yi Wan He Kuang Ye Limited, Washington Mills, Lianyungang Hengbao Quartz, Xuzhou Sainuo Quartz, etc. The global players
