### Research Summary

A fusion machine refers to a device or system designed to achieve controlled nuclear fusion, a process in which two atomic nuclei combine to form a heavier nucleus, releasing a significant amount of energy. The primary goal of fusion machines is to replicate the energy-producing reactions that occur in the sun and stars, offering a potentially limitless and cleaner source of power compared to traditional nuclear fission. Various types of fusion machines exist, such as tokamaks, stellarators, and laser-driven inertial confinement devices, each employing distinct approaches to create the extreme conditions necessary for fusion reactions to occur. Researchers and engineers worldwide are actively working on developing and improving fusion machines as part of the quest for a sustainable and abundant energy source for the future.

The major global manufacturers of Fusion Machine include Spectris, SPEX SamplePrep, XRF Scientific, Fluxana, LGC, Tenai, Beijing ZX, Duolin, etc. The global players competition landscape in this report is divided into three tiers.
