Research Summary

Gallium arsenide germanium (GaAsGe) solar cells are advanced photovoltaic devices that utilize a semiconductor compound made of gallium, arsenic, and germanium to convert sunlight into electricity. These solar cells are known for their high efficiency, especially in space applications where weight and space are critical factors. GaAsGe solar cells have a higher efficiency compared to traditional silicon-based solar cells due to their superior electrical properties, including a higher absorption coefficient and a narrower bandgap. The addition of germanium to the gallium arsenide structure helps to further optimize the bandgap, allowing the cell to efficiently convert a broader spectrum of sunlight into electricity. This makes GaAsGe solar cells particularly useful for applications where space is limited, such as satellites and space probes, as well as in certain terrestrial applications where high efficiency is paramount, such as concentrator photovoltaics. However, their higher cost limits their widespread use in terrestrial applications.

The major global manufacturers of Gallium Arsenide Germanium Solar Cell include AZUR SPACE, Spectrolab, Rocket Lab, CESI, China Power God Co., Ltd., Shanghai Institute of Space Power-Sources (SISP), Xiamen Changelight Co., Ltd, KINGSOON, Uniwatt Technology Co.,LTD, Jiangsu Yixing Derong Technology, etc. The global players competition landscape in this report is divided into three tiers.
