### Research Summary

A galvanometer scanner is an optical device that utilizes a galvanometer, an instrument for measuring small electric currents, to control the position of a laser beam or mirror rapidly. The galvanometer scanner system is commonly employed in laser scanning applications, such as laser engraving, laser marking, and laser projection systems. The galvanometer, which typically consists of a mirror attached to a moving coil, is driven by electric currents to achieve precise and rapid angular movements. This movement allows the laser beam to be redirected quickly and accurately across a two-dimensional plane. The galvanometer scanner's high-speed and precise control make it valuable for applications where fast and accurate laser scanning is required, enabling efficient and intricate laser processing in various industrial and scientific settings.

The major global manufacturers of Galvanometer Scanner include Cambridge Technology, Aerotech, SCANLAB GmbH, El.En., Nutfield Technology (FARO), Shenzhen Han's Scanner, Edmund Optics, Sino-Galvo, Canaon, Citizen Chiba Precision, Sunny Technology, ScannerMAX (Pangolin Laser Systems), Shenzhen
