Research Summary

A game camera, also known as a trail camera or a wildlife camera, is a specialized camera designed for capturing images or videos of wildlife or outdoor activities, typically in remote or natural settings. These cameras are commonly used by hunters, researchers, and wildlife enthusiasts to monitor animal behavior, track movements, or survey biodiversity. Game cameras are equipped with motion sensors and infrared or white LED flash technology, allowing them to capture images or videos when triggered by the movement of animals, even in low-light conditions.
