### Research Summary

Garden pesticides are chemical substances used to control or eliminate pests that may damage plants, crops, or ornamental vegetation in gardens. These pesticides can target a variety of pests, including insects, fungi, and weeds, helping gardeners protect their plants from potential harm. Pesticides come in different forms, including sprays, powders, and granules, and may contain insecticides, fungicides, herbicides, or a combination of these agents. While they can be effective in managing pest-related issues, the use of garden pesticides requires careful consideration to minimize environmental impact and potential harm to beneficial organisms.
