Research Summary

Gas compressors are mechanical devices designed to increase the pressure of a gas by reducing its volume. These devices play a crucial role in various industrial processes, including gas transmission, processing, and manufacturing. Gas compressors come in different types, such as positive displacement compressors (like reciprocating and rotary compressors) and dynamic compressors (like centrifugal compressors). In positive displacement compressors, gas is trapped in a chamber and mechanically compressed, while dynamic compressors use rotating impellers to impart kinetic energy to the gas, which is then converted into pressure. Gas compressors are essential in applications where pressurized gas is needed for pneumatic tools, gas pipelines, refrigeration, and various manufacturing processes. Their ability to handle a range of gases at different pressures makes them versatile and vital components in industrial settings.

The major global manufacturers of Gas Compressors include GE, ARIEL, Dresser-Rand, Atlas Copco, Burckhardt, Ingersoll Rand, HMS Group, Gardner Denver,

Accudyne, BAUER, Kobelco, CHKZ LLC, Blower works, Kaishan, etc. The global players competition landscape in this report is divided into three tiers.
