Research Summary

A Gas-Engine Heat Pump (GHP) is an energy-efficient heating and cooling system that utilizes a gas-powered engine to drive a heat pump cycle. This technology combines the benefits of a gas engine's high efficiency with the heat pump's ability to provide both heating and cooling. In a GHP system, the gas engine drives a compressor, which compresses refrigerant to facilitate the transfer of heat between the indoor and outdoor environments. GHPs are known for their high efficiency, particularly in cold climates, where they can extract heat from the outdoor air even when temperatures are low. By incorporating a gas engine into the system, GHPs can achieve greater overall efficiency compared to traditional heating and cooling systems. This technology is gaining attention as a sustainable and cost-effective solution for residential, commercial, and industrial heating and cooling applications.

The major global manufacturers of Gas-Engine Heat Pump (GHP) include Panasonic, YANMAR & TICA, Chengdu Smart Action Technology, Lanyan Hi-Tech (Tianjin) Gas Technology., etc. The global players competition landscape in this report is divided into
