### Research Summary

Gas phase filtration is a specialized air purification technique designed to remove gaseous pollutants, odors, and volatile organic compounds (VOCs) from the air. Unlike particulate filtration that targets solid particles, gas phase filtration focuses on capturing and adsorbing molecular contaminants in the gas state. This process typically involves the use of adsorbents, such as activated carbon or other chemical absorbents, which attract and retain gas molecules as air passes through the filtration system. Gas phase filtration is commonly employed in various applications, including industrial settings, commercial spaces, and residential environments, where the removal of unwanted odors or harmful gases is essential for maintaining indoor air quality. This technology plays a crucial role in creating healthier and more comfortable living and working environments by effectively addressing the challenges posed by airborne gaseous pollutants.

The major global manufacturers of Gas Phase Filtration include Camfil, Daikin, Mann+Hummel, Filtration Group, Nichias, Parker, Freudenberg Filtration Technologies,

D-Mark, Inc, Toyobo, Mayair, Suzhou Huatai Airtech Filter, Deltrian International, HS-Luftfilterbau, Jiangsu Shenda, Cosmos Air Purification & Environmental System, etc. The global players competition landscape in this report is divided into three tiers.
