### Research Summary

A Gasoline Particulate Filter (GPF) for passenger cars is an emission control device designed to capture and reduce particulate matter (PM) emissions from gasoline engines. Similar to diesel particulate filters used in diesel engines, a GPF is integrated into the exhaust system of gasoline-powered vehicles. It employs a honeycomb-like structure with porous walls that trap and filter out fine particles produced during the combustion of gasoline. This technology is especially important in meeting increasingly stringent emission standards. By minimizing the release of particulate matter into the atmosphere, GPFs contribute to improved air quality and help automakers comply with environmental regulations. GPFs are part of the broader effort within the automotive industry to enhance the environmental performance of internal combustion engines and reduce the overall environmental impact of passenger vehicles.

The major global manufacturers of Gasoline Particulate Filter for Passenger Cars include Corning, NGK Insulators, Faurecia, Tenneco, Johnson Matthey, Umicore,
