Research Summary

A gear skiving machine is a specialized tool used in the manufacturing process of gears, particularly for producing internal or external gears with high precision. Gear skiving is a cutting process that combines elements of both hobbing and shaping, and the skiving machine employs a skiving tool with multiple cutting edges to progressively shape the gear teeth. This process is known for its efficiency in producing high-quality gears with complex tooth profiles. Gear skiving machines often use CNC (Computer Numerical Control) technology for precise control over the cutting process, allowing for customization based on specific gear requirements. Gear skiving is commonly employed in industries such as automotive and aerospace, where the production of gears with intricate designs and tight tolerances is essential for optimal performance in mechanical assemblies.

The major global manufacturers of Gear Skiving Machine include Liebherr, JTEKT, Gleason, NACHI-FUJIKOSHI, FFG Werke, PITTLER, NIDEC MACHINE TOOL CORPORATION, Klingelberg, etc. The global players competition landscape in this
