### Research Summary

Geared motors are integrated drive systems that combine an electric motor and a gearbox into a single unit. The gearbox, which consists of gears and shafts, serves to modify the output speed and torque of the motor. This combination allows for a compact and efficient solution, where the gearbox reduces the high-speed, low-torque output of the motor to a lower speed with increased torque. Geared motors find widespread application in various industrial and commercial settings, such as conveyor systems, material handling equipment, and machinery, where precise control over speed and torque is essential. They eliminate the need for additional external gearing components and provide a more streamlined and often cost-effective solution for applications requiring specific speed and torque requirements. The versatility and flexibility of geared motors make them a popular choice in the field of power transmission for diverse mechanical systems.

The major global manufacturers of Geared Motors include SEW-EURODRIVE, Sumitomo Heavy Industries, ABB, Siemens, Nord, Weg, TECO, Rossi SpA, Demag,

Nidec, Renold, ACTOM, JIE, etc. The global players competition landscape in this report is divided into three tiers.
