Research Summary

Gel coats are specialized coatings applied to the surface of composite materials, particularly fiberglass-reinforced composites, to enhance their appearance and durability. Composed of a pigmented resin, typically polyester or epoxy, gel coats are applied in liquid form to the mold before the composite material is added. As the composite cures, the gel coat hardens, forming a smooth, protective outer layer that provides resistance against environmental factors such as UV radiation, abrasion, and moisture. Gel coats not only contribute to the aesthetics of the finished product by offering a glossy and consistent surface but also play a crucial role in preventing water absorption and increasing the longevity of the composite structure. They are commonly used in applications such as boat hulls, automotive parts, and architectural elements where both performance and visual appeal are important.

The major global manufacturers of Gel Coats include INEOS Composites, BuFA Group, HK Research Corporation, Polynt-Reichhold, Scott Bader, AOC, Allnex, Interplastic, Mader, Tomatec, Poliya Composites Resins and Polymers, Turkuaz Polyester, Sika Advanced Resins, Sicomin, Aekyung Chemical, Aromax, Jiangsu Fullmark Chemicals,
