Research Summary

Geomembranes are synthetic liners or barriers used in various civil engineering and environmental applications to control the movement of fluids, prevent seepage, and provide containment for liquids or solids. Typically made from materials such as high-density polyethylene (HDPE), polyvinyl chloride (PVC), or ethylene propylene diene monomer (EPDM), geomembranes exhibit excellent impermeability and durability. These flexible sheets are deployed in projects such as landfill lining, water containment reservoirs, mining heap leach pads, and environmental protection applications. Geomembranes create a reliable barrier that prevents the infiltration or leakage of liquids or contaminants, offering solutions for environmental protection, waste containment, and water resource management. The selection of a specific type of geomembrane depends on factors such as the project requirements, environmental conditions, and the type of materials being contained or controlled.

The major global manufacturers of Geomembranes include GSE Holding, Firestone, AGRU, Solmax, JUTA, Carlisle, Sotrafa, Yaohua Geotextile, Officine Maccaferri, Atarfil,
