Research Summary

Geotextiles are synthetic textile materials used in civil engineering and construction applications for soil stabilization, erosion control, drainage, and filtration. These versatile fabrics are made from synthetic fibers such as polypropylene, polyester, or polyethylene, which are woven, knitted, or bonded together to form a permeable, flexible sheet. Geotextiles are engineered to withstand harsh environmental conditions and provide various functions depending on the specific requirements of the project. They can be used as separation layers between different soil types, reinforcement for retaining walls and embankments, filtration layers to prevent soil erosion while allowing water to pass through, and drainage systems to manage groundwater flow. Geotextiles offer advantages such as increased soil strength, improved drainage efficiency, reduced soil erosion, and enhanced durability, making them essential components in a wide range of civil engineering and environmental applications, including road construction, landfills, coastal protection, and landscaping.

The major global manufacturers of Geotextiles include Hanes GEO Components,

Solmax, DuPont, Maccaferri, Huesker, NAUE, Freudenberg Group, Taian Modern Plastic, Geofabrics Australasia, Asahi Kasei Advance, Feicheng Lianyi, Khator Technical Textiles, Taian Road Engineering Materials, ACE Geosynthetics, Shandong Hongxiang New Geo-Material, Tensar Corporation, etc. The global players competition landscape in this report is divided into three tiers.
