### Research Summary

Geothermal energy is a renewable and sustainable form of energy derived from the Earth's internal heat. It harnesses the natural heat stored beneath the Earth's surface and converts it into electricity or directly uses it for heating applications. Geothermal power plants typically tap into high-temperature reservoirs of hot water or steam found deep below the Earth's crust. The heat is brought to the surface through wells, and the steam is used to drive turbines, generating electricity. Geothermal energy can also be utilized for direct heating in residential, commercial, and industrial settings through the use of heat pumps or by tapping into naturally occurring hot springs. With low greenhouse gas emissions and a continuous and reliable source of energy, geothermal power contributes to a sustainable energy mix, providing electricity and thermal energy while minimizing environmental impact.

The major global suppliers of Geothermal Energy include Energy Development, Comisi?n Federal de Electricidad, Ormat, Enel Green Power, Calpine, KenGen, Pertamina Geothermal Energy, Contact Energy, Orkuveita Reykjavikur, Berkshire
