Research Summary

Glass Fiber Reinforced Polymer (GFRP) composites are advanced materials formed by embedding fine glass fibers within a polymer matrix, typically composed of epoxy, polyester, or vinyl ester resins. The combination of these materials results in a lightweight, high-strength, and durable composite with enhanced mechanical properties. GFRP composites exhibit excellent corrosion resistance, making them suitable for various applications in construction, automotive, aerospace, and infrastructure. The inherent versatility of GFRP composites allows for customization of their properties, enabling engineers and manufacturers to tailor the material to specific project requirements. This innovative material has gained popularity as an alternative to traditional materials like steel or aluminum due to its favorable strength-to-weight ratio, corrosion resistance, and design flexibility.

The major global manufacturers of GFRP Composites include BASF, Lanxess, DSM, SABIC, Avient, DuPont, Solvay, Celanese, RTP, Evonik, Kolon, Daicel, Denka, Kingfa, etc. The global players competition landscape in this report is divided into three tiers.
