### Research Summary

Giant Magneto-Resistive (GMR) sensors are advanced magnetic sensors that exploit the Giant Magneto-Resistive effect, a phenomenon in which the electrical resistance of a material changes significantly in response to an applied magnetic field. This effect is most pronounced in multilayer structures composed of alternating ferromagnetic and non-magnetic layers. GMR sensors consist of thin film stacks with nanoscale layers, and when exposed to a magnetic field, the relative alignment of the magnetic moments in the ferromagnetic layers induces changes in electrical resistance. This sensitivity to magnetic fields allows GMR sensors to detect and measure small magnetic variations with high precision. GMR sensors find applications in a wide range of industries, including electronics, automotive systems, industrial automation, and medical devices, contributing to advancements in magnetic sensing technology for diverse purposes such as data storage, position sensing, and navigation.

The major global manufacturers of Giant Magneto Resistive (GMR) Sensors include
