Research Summary

Glass ceramics are a type of advanced material that combines the characteristics of both glass and ceramics. These materials are initially processed as glasses, typically by melting and then shaping into the desired form. Subsequently, controlled crystallization is induced through heat treatment, transforming them into a crystalline structure. This dual-phase composition imparts unique properties such as high strength, thermal stability, and resistance to wear and corrosion, which are not typically associated with either traditional glasses or ceramics alone. Glass ceramics find applications in a variety of fields, including dental restorations, cookware, optical components, and even as substrates for electronic devices due to their tailored combination of glassy and crystalline properties. The ability to customize the composition and properties of glass ceramics makes them valuable for specific applications where the advantages of both glass and ceramics are desired.

The major global manufacturers of Glass Ceramics include Schott, Eurokera, Nippon Electric Glass, ILVA Glass SpA, Ohara Corporation, Wenzhou Kanger, Huzhou

Tahsiang, KEDI Glass-ceramic Industrial, Jingniu Glass Ceramics, Fast East Opto, Dongguan Hongtai, etc. The global players competition landscape in this report is divided into three tiers.
