Research Summary

Glass cord refers to a type of reinforcement material used in various industrial applications, particularly in the manufacturing of tires and industrial rubber products. It is composed of fine strands of glass fibers twisted or plied together to form a cord. The glass cord provides strength and reinforcement to the rubber, enhancing the mechanical properties of the final product. It is known for its high tensile strength, resistance to heat and abrasion, and dimensional stability. Glass cord reinforcement is widely utilized in tire manufacturing to improve the overall strength, durability, and performance of tires, particularly in high-performance or heavy-duty applications. The use of glass cord in rubber products helps enhance their structural integrity, providing a reliable solution for demanding industrial and automotive requirements.
