Research Summary

Glass Fiber Reinforced Plastic (GFRP) is a composite material composed of a polymer matrix, commonly epoxy or polyester resin, reinforced with glass fibers. The glass fibers, usually in the form of woven mats or rovings, provide high tensile strength and stiffness to the material, while the polymer matrix imparts durability and facilitates shaping. GFRP composites are known for their excellent strength-to-weight ratio, corrosion resistance, and versatility in design. These materials are widely used in various industries, including construction, automotive, aerospace, and marine applications. In construction, GFRP composites are utilized for manufacturing panels, pipes, and structural elements, offering durability and resistance to environmental factors. In the automotive and aerospace sectors, GFRP components contribute to lightweight structures, improving fuel efficiency and performance. The adaptability and strength of GFRP make it a preferred choice for applications where a combination of strength, durability, and reduced weight is essential.
