### Research Summary

Glass fiber reinforced polypropylene (PP) is a composite material consisting of polypropylene resin reinforced with glass fibers. This combination results in a material with enhanced mechanical properties, stiffness, and strength compared to unfilled polypropylene. The glass fibers, typically in the form of short fibers or continuous strands, are dispersed throughout the polypropylene matrix, providing reinforcement and improving the material's performance. Glass fiber reinforced polypropylene offers advantages such as increased tensile strength, flexural strength, impact resistance, and dimensional stability, making it suitable for a wide range of applications in automotive, aerospace, construction, and consumer goods industries. In automotive applications, for example, it is commonly used for manufacturing interior and exterior parts, such as bumpers, door panels, dashboard components, and under-the-hood parts, due to its lightweight, durability, and cost-effectiveness. Additionally, glass fiber reinforced polypropylene can be easily molded into complex shapes using various processing techniques such as injection molding, extrusion, and compression molding, further

expanding its versatility and applicability.

The major global manufacturers of Glass Fiber Reinforced Polypropylene include SABIC, Celanese, Avient, RTP, Daicel, Kingfa, Borealis, Mitsubishi Chemical, TechnoCompound, Mitsui Chemicals, Trinseo, Lotte Chemical, Sumitomo Chemical, Kolon, Shanghai PRET Composites, etc. The global players competition landscape in this report is divided into three tiers.
