Research Summary

Glass insulators are specially designed glass or ceramic devices used to insulate and support electrical conductors, such as wires or cables, from the supporting structures, typically in electrical power distribution and transmission systems. These insulators prevent the flow of electric current between the conductor and the supporting structure, ensuring the safe and efficient transmission of electricity. Glass insulators are characterized by their unique shapes, often featuring a series of petticoats or rings that increase the surface distance between the conductor and the supporting structure. This design helps prevent flashovers and electrical arcing, even in challenging weather conditions. Glass insulators are valued for their resistance to environmental factors, durability, and effectiveness in maintaining the integrity of electrical insulation systems. While newer materials such as polymers are also used for insulators, glass insulators continue to be employed in various applications where their specific properties are advantageous.

The major global manufacturers of Glass Insulators include Seves Group, MacLean

Power Systems, Nanjing Electric (BPG), Global Insulator Group, Sichuan Yibin Global Group, ZX Insulators, Zhejiang Tailun Insulator, JSC U.M.E.K., Shandong Ruitai Glass Insulator, Hubbell, Verescence La Granja Insulators, Zhejiang Jinlihua Electric, Victor Insulators, GAMMA Insulator (Corona Group), Incap Limited, etc. The global players competition landscape in this report is divided into three tiers.
