Research Summary

Glass-like carbon coated graphite is a composite material that combines the properties of graphite and glass-like carbon. In this material, a layer of glass-like carbon is applied as a coating onto a graphite substrate. Glass-like carbon, also known as vitreous carbon, is an amorphous form of carbon that exhibits high-temperature stability, chemical inertness, and excellent electrical conductivity. The coating enhances the mechanical strength, corrosion resistance, and thermal properties of the graphite substrate, making it suitable for demanding applications in aerospace, electronics, and chemical processing. The combination of graphite and glass-like carbon properties offers a material with improved performance, providing advantages in terms of strength, durability, and resistance to extreme conditions. This type of composite is often used in applications where the unique characteristics of both graphite and glass-like carbon are required for optimal performance.

The major global manufacturers of Glass Like Carbon Coated Graphite include Carbone
