Research Summary

Glass-lined tubes are tubular structures with an internal lining made of glass, designed for various industrial applications that require resistance to corrosion and chemical attack. The glass lining is applied to the interior surface of the tube through a fusion process, where the glass fuses to the metal substrate, creating a durable and inert protective layer. This construction makes glass-lined tubes suitable for processes involving corrosive substances, high temperatures, and challenging chemical environments. They find applications in industries such as chemical processing, pharmaceuticals, and petrochemicals, where the combination of the mechanical strength of the metal with the corrosion resistance of glass is essential. Glass-lined tubes contribute to the longevity and reliability of equipment used in these industries, ensuring the integrity of the tubes even in aggressive operating conditions.

The major global manufacturers of Glass-lined Tubes include DE Dietrich, Ferro, Thaletec, Glasscoat, Pfaudler, US Pipe, Taiji USA, Estrellausa, Buchiglas, Arde Barinco, CUSTOM FAB, SGE, Jiangsu Yangyang, Zibo Taiji, Jiangsu Gongtang, Hebei
