Research Summary

Glass mat, also known as fiberglass mat, is a non-woven material composed of randomly oriented glass fibers held together by a binder. The manufacturing process involves spreading chopped glass strands onto a conveyor belt and applying a binder, typically an emulsion or powder, to hold the fibers in place. The mat is then heated to cure the binder, creating a flexible and porous sheet. Glass mats are widely used as reinforcement in composites, such as fiberglass-reinforced plastics (FRP), where they add strength and stiffness to the material. They find applications in construction, automotive, marine, and other industries for their lightweight, corrosion-resistant, and insulating properties. Depending on the application, glass mats can be further processed into various forms, including chopped strand mat (CSM) or continuous strand mat (CSM), to suit specific manufacturing requirements.

The major global manufacturers of Glass Mat include Owens Corning, Jushi Group, Binani Industries, Saint-Gobain, Taiwan Glass, CPIC, Nippon Electric Glass, China Beihai, Nitto Boseki, Jiangsu Changhai, Texas Fiberglass, Jiangsu Jiuding, etc. The global players competition landscape in this report is divided into three tiers.
