Research Summary

Glass Mat Thermoplastics (GMT) is a type of composite material that combines glass mat reinforcement with a thermoplastic resin matrix. The manufacturing process involves impregnating a continuous glass mat with a thermoplastic resin, such as polypropylene or polyethylene, followed by heat and pressure to mold the material into the desired shape. GMT offers a high strength-to-weight ratio, impact resistance, and dimensional stability, making it suitable for various applications in the automotive industry, particularly for manufacturing components such as automotive body panels, underbody shields, and interior parts. The continuous glass mat reinforcement contributes to the material's structural integrity, while the thermoplastic matrix allows for efficient processing through injection molding or compression molding, providing a cost-effective and versatile solution for lightweight, durable, and recyclable automotive components.

The major global manufacturers of Glass Mat Thermoplastics (GMT) include Hanwha, Quantrant Plastic Composites, Crerax, Mitsubishi Chemical Advanced Materials, Nmg
