Research Summary

A glass and plastic greenhouse is a controlled environment structure designed for cultivating plants by providing a sheltered and regulated climate conducive to optimal growth. The greenhouse typically consists of a framework made of metal, wood, or other materials, covered with both glass and plastic panels. The combination of glass and plastic serves specific purposes in greenhouse construction. Glass panels allow sunlight to enter while providing insulation, trapping heat within the structure. This helps maintain a warmer temperature, supporting plant growth even in colder seasons. On the other hand, plastic panels, often made of polyethylene or polycarbonate, are lightweight, durable, and may be used to regulate humidity and control the amount of sunlight exposure. The use of both materials enables greenhouse operators to strike a balance between insulation and light transmission, creating an optimal environment for plant cultivation throughout the year. Greenhouses are widely utilized in agriculture and horticulture to extend growing seasons, protect plants from adverse weather conditions, and enhance crop yields.

The major global manufacturers of Glass and Plastic Greenhouse include HortiMax, Netafim, Guangdong Hongke Agricultural Machinery R&D, Baike Greenhouse, Yisheng Greenhouse, Henan Zhonghao Greenhouse Engineering, Shandong Fufeng Agricultural Development, Shandong Shouguang Jiuhe Agricultural Development, RUI XUE GLOBAL, Trinog-xs(Xiamen) Greenhouse Tech, Beijing Jingpeng Global Technology, ORITECH, Hefei Rizhifeng agriculture, Jian Chuan Industrial, Beijing Jingpeng Global Technology, Kunshan Yonghong Greenhouse, etc. The global players competition landscape in this report is divided into three tiers.
