### Research Summary

Glass wool board, also known as fiberglass board, is a type of thermal insulation material made from fine glass fibers bonded together using a thermosetting resin. The manufacturing process involves melting glass and then forming it into thin fibers, which are then assembled into a mat. This mat is compressed and heated to create a dense and rigid board. Glass wool boards are known for their excellent thermal insulation properties, low thermal conductivity, and fire resistance. They are widely used in construction for insulating walls, roofs, and ceilings, providing effective energy efficiency and temperature regulation. The boards are available in various thicknesses and densities to meet specific insulation requirements, offering a versatile and cost-effective solution for enhancing the thermal performance of buildings and structures.

The major global manufacturers of Glass Wool Board include Knauf, Owens Corning, Saint-Gobain, Johns Manville, Huamei Energy-saving Technology, Shenzhou Energy Saving Technology, KCC Corporation, etc. The global players competition landscape in this report is divided into three tiers.
