### Research Summary

Glucose, dextrose, and maltodextrin are carbohydrates derived from different sources, each with distinct characteristics and uses. Glucose, often referred to as blood sugar, is a simple sugar and the primary source of energy for the body's cells. It can be found naturally in foods like fruits and honey or as a component of more complex carbohydrates. Dextrose is a form of glucose that is chemically identical but is typically produced from starch through hydrolysis, making it a common ingredient in food and medical products. Maltodextrin, on the other hand, is a carbohydrate polymer composed of multiple glucose units derived from starch. It is produced through partial hydrolysis of starch and serves various purposes in the food industry as a thickener, filler, or bulking agent. While all three are carbohydrates and sources of energy, they differ in their structures, origins, and applications in the food and pharmaceutical industries.

The major global manufacturers of Glucose, Dextrose and Maltodextrin include Roquette, Ingredion, Grain Processing Corp (GPC), Cargill, ADM, Xiwang Sugar,
