Research Summary

A glucose meter is a portable electronic device designed for the quick and convenient measurement of blood glucose levels. Primarily used by individuals with diabetes to monitor their blood sugar regularly, these compact meters provide a means for self-testing without the need for laboratory analysis. The process involves pricking a small sample of blood, usually obtained from a fingertip, and applying it to a disposable test strip. The glucose meter then quantifies the blood glucose concentration by detecting the chemical reaction between the glucose in the blood sample and reagents on the test strip. The meter displays the results in units of milligrams per deciliter (mg/dL) or millimoles per liter (mmol/L), offering immediate feedback on blood sugar levels. The widespread availability and ease of use of glucose meters have significantly contributed to the self-management of diabetes, allowing individuals to make informed decisions about their diet, medication, and lifestyle based on real-time glucose measurements.

The major global manufacturers of Glucose Meter include Roche, Johnson & Johnson, Abbott, Ascensia, ARKRAY, I-SENS, OMRON, B. Braun Medical, 77 Elektronika,
