Research Summary

Glucose is a simple sugar and a primary source of energy for living organisms. It is a monosaccharide, meaning it consists of a single sugar molecule. Glucose is commonly found in various foods, particularly carbohydrates such as bread, rice, potatoes, and fruits. It is also produced in the body through the breakdown of carbohydrates during digestion. Glucose is absorbed into the bloodstream and transported to cells throughout the body, where it is used as fuel to produce energy through a process called cellular respiration. Excess glucose is stored in the liver and muscles as glycogen for future energy needs. Glucose plays a crucial role in maintaining blood sugar levels within a narrow range, and abnormalities in glucose metabolism can lead to health issues such as diabetes. Additionally, glucose is often used in medical settings as a treatment for low blood sugar levels (hypoglycemia) and as a source of energy during intravenous (IV) administration.

The major global manufacturers of Glucose include Cargill, FIDES Business Partner AG (Blattmann Schweiz AG), Roquette, Tate & Lyle, Ingredion Incorporated, Baolingbao Biology, Grain Processing Corporation, etc. The global players competition landscape in
