### Research Summary

Glucuronic acid is a chemical compound derived from glucose through a process known as glucuronidation. It is a vital component of the body's detoxification processes, where it conjugates with various substances to facilitate their elimination from the body. This conjugation process enhances the water solubility of potentially harmful or nonessential compounds, promoting their excretion through urine. Glucuronic acid is involved in the formation of glucuronides, which play a crucial role in the liver's phase II detoxification reactions. Additionally, it is a structural component of glycosaminoglycans, essential components of connective tissues, and can be found in various natural substances, including hyaluronic acid. The conjugation of substances with glucuronic acid is a key mechanism for the body to neutralize and eliminate drugs, toxins, and endogenous waste products.

The major global manufacturers of Glucuronic Acid include Anhui Hegeng Biology, Kalion, Beijing Chemsynlab, Shanghai Meng Yabio, Guangzhou Roles-Bio, Shanghai Baomanbio, etc. The global players competition landscape in this report is divided into three tiers.
