Research Summary

Glutaraldehyde is a chemical compound with the molecular formula $C_5H_8O_2$. It is a clear, colorless liquid with a pungent odor and is widely used as a disinfectant and sterilizing agent in various industries, including healthcare and laboratory settings. Glutaraldehyde exhibits strong antimicrobial properties, effectively eliminating bacteria, viruses, and fungi. It works by cross-linking the proteins in microbial cell walls, disrupting their structure and function. In healthcare, glutaraldehyde is often employed for cold sterilization of medical equipment, particularly heat-sensitive devices such as endoscopes. It is also used as a fixative in histology to preserve biological specimens. Despite its efficacy, glutaraldehyde should be handled with care due to its potential irritant properties, and proper safety measures must be observed during its use. Additionally, alternative disinfection methods are sometimes considered due to concerns about its toxicity and the development of safer alternatives.

The major global manufacturers of Glutaraldehyde include DuPont, BASF, Jinghong Chemical, Wuhan Dico Chemical, Hubei Xinjing New Material, etc. The global players
