Research Summary

Glycerol monooleate is an ester derived from the reaction of glycerol and oleic acid. It is part of the glycerol fatty acid ester family and is commonly used in the food, pharmaceutical, and cosmetic industries. Glycerol monooleate acts as an emulsifier and surfactant, helping to stabilize and mix ingredients that would normally separate, such as oil and water. In the food industry, it is utilized in the production of various processed foods, including baked goods, confections, and dairy products, to improve texture and enhance shelf life. In cosmetics, glycerol monooleate is employed as an emollient and emulsifying agent, contributing to the smooth texture of creams and lotions. Additionally, it may have pharmaceutical applications, such as in the formulation of certain medications. Its versatility in different industries is attributed to its ability to modify the physical properties of various substances, making it a valuable ingredient in the development of a wide range of consumer products.
