Research Summary

Glycidyl methacrylate (GMA) is a chemical compound that belongs to the family of methacrylate esters. It is characterized by the presence of both a glycidyl group and a methacrylate group in its molecular structure. GMA is commonly used in the production of polymers and resins, where its reactive functional groups make it suitable for polymerization reactions. It is particularly employed in the synthesis of glycidyl methacrylate polymers, which find applications in coatings, adhesives, and dental materials. GMA's reactivity allows it to form cross-linked structures, contributing to the strength and durability of the resulting polymers. However, it's important to note that GMA can be a skin and eye irritant, and safety precautions should be taken when handling this compound in industrial and laboratory settings.

The major global manufacturers of Glycidyl Methacrylate (GMA) include Dow Chemicals, Mitsubishi Gas Chemical (MGC), Jiangxi Ruixiang, Weicheng New Material, Nanjing Rongan Chemical, GP Natural Products, JinDun Chemical, Xiayi Yuhao Additives, Xiansheng Biotech, Estron Chemical, etc. The global players competition
