Research Summary

A GNSS (Global Navigation Satellite System) signal simulator is a device or system designed to replicate the signals transmitted by satellite constellations like GPS, GLONASS, Galileo, or BeiDou. These simulators generate synthetic signals that mimic the characteristics of actual GNSS signals received by navigation devices. GNSS signal simulators are crucial tools for testing and validating the performance of GNSS receivers in a controlled and repeatable environment. They allow developers, manufacturers, and researchers to assess how a GNSS receiver responds under various conditions, including different satellite constellations, signal strengths, and interference scenarios. This testing is essential for ensuring the accuracy, reliability, and robustness of GNSS receivers across diverse applications, from consumer devices like smartphones to specialized equipment used in aviation, automotive navigation, and precision agriculture.

The major global suppliers of GNSS Signal Simulator include Spirent, Rohde & Schwarz, VIAVI Solutions, Orolia, IFEN GmbH, CAST Navigation, RACELOGIC,
