Research Summary

The golf shaft is a vital component of a golf club, connecting the clubhead to the grip. It plays a crucial role in determining the performance characteristics of the club during a swing. Golf shafts are typically made from materials such as steel, graphite, or a combination of both, each offering distinct benefits. Graphite shafts are known for being lighter, promoting faster swing speeds, and providing more flexibility, which can be beneficial for golfers seeking greater distance and a softer feel. Steel shafts, on the other hand, are often heavier and can provide more control, precision, and a firmer feel. The flex of a golf shaft, ranging from extra stiff to ladies' flex, influences the trajectory and accuracy of shots. Golfers often choose shafts based on their swing tempo, strength, and personal preferences, as the shaft significantly influences the overall performance and feel of a golf club.

The major global manufacturers of Golf Shaft include True Temper, Mitsubishi, Nippon Shaft, Paderson Shafts, Fujikura, FEMCO, Graphite Design, LA Golf, UST Mamiya, etc. The global players competition landscape in this report is divided into three tiers.
