Research Summary

A GPS repeater is a device designed to enhance and extend the reach of Global Positioning System (GPS) signals in indoor or obstructed environments where direct satellite signals might be weak or unavailable. The repeater consists of an outdoor antenna that captures GPS signals from satellites and an indoor unit that rebroadcasts these signals within a confined space, such as buildings, tunnels, or covered structures. By amplifying and retransmitting the GPS signals, a GPS repeater enables devices like GPS receivers, navigation systems, or tracking devices to maintain accurate and continuous location information even in areas with poor satellite visibility. This technology is particularly useful in various applications, including navigation in warehouses, underground facilities, or indoor parking structures, where maintaining GPS connectivity is challenging due to physical barriers.

The major global manufacturers of GPS Repeater include Global Invacom, GPS Source, Inc., Rojone, Microlab, LLC, ROGER-GPS, GPS Networking, Tri-M Technologies, RFT, Genew Technologies Co, Crecre, Tojoin, AuCon GmbH, Time and

Frequency Technology, V3 Novus, GEMS Navigation, Adactus AB, COMM-connect, Synchronous, Aerfu, etc. The global players competition landscape in this report is divided into three tiers.
